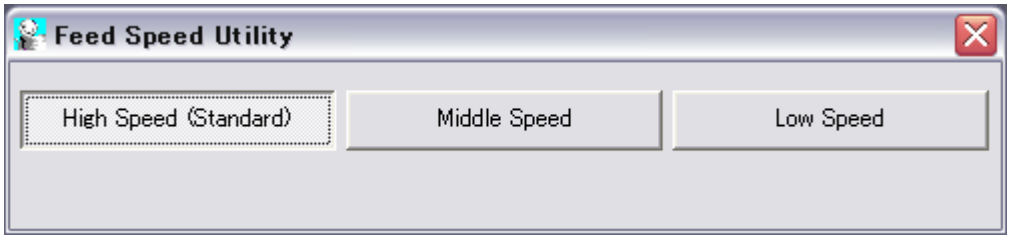
The Feed Speed Utility is utility software that changes the paper feed speed.
Slow paper feeding reduces a paper jam and a double feed with thin paper, carbonless paper and so on. It will provide a better paper feeding.

■How to use

1 Download the file to a folder in your PC.

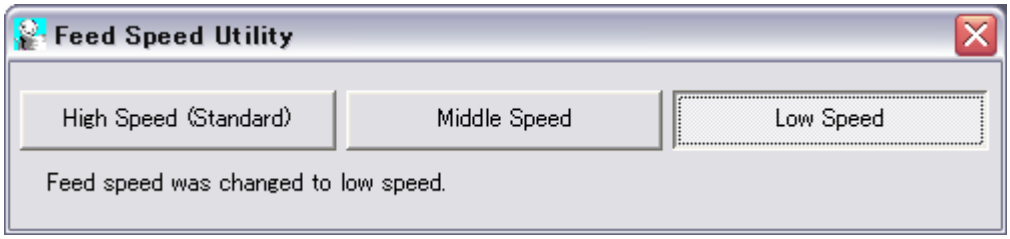
2 Check if the scanner is connected to the PC and ready to use.
Also close all applications that you executed.
(For SCSI connection, restart your PC.)

3 Execute the Feed Speed Utility (FeedSpeedUtility.exe) that you downloaded.



4 Select either of “High Speed (Standard)”, “Middle Speed” or “Low Speed” button.
“Low Speed” feeding cause a steady paper feed but reduce the number of scanning documents per minutes.

5 If the display of “Feed speed was changed to XX speed.” appears, it is set completion.



6 The scanner memorizes the feed speed settings.
It is unnecessary to execute this utility again if you do not need to change the feed speed.

7 In case of changing the feed speed settings, please use this utility again.
