

WV-ASM300: Camera image display when using the “PC diagnosis (4K camera)” function

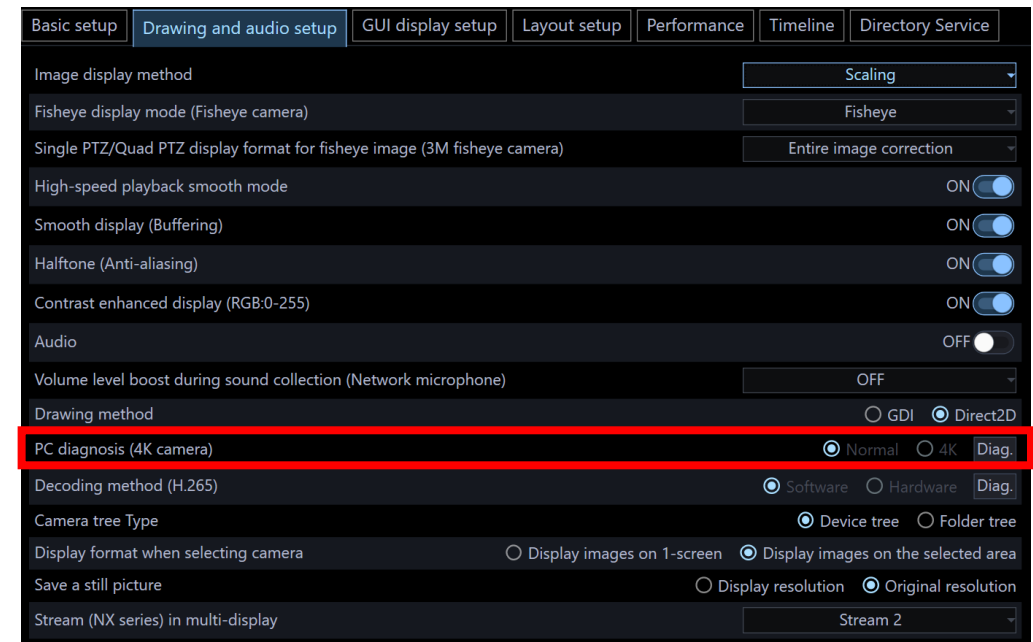

When “4K” is selected for the “PC diagnosis (4K camera)” function of WV-ASM300 an issue may occur in which **the camera image display becomes full screen green**. If the issue occurs, please switch to the “Normal” setting.

[Example of the issue]

* Recording images normally

[Setting Window]

*: Please refer to the operating instructions “3.2.2. Drawing and audio setup” for settings

This issue may occur depending on the combination of PC hardware and driver software. Please refer to the following URL page for information on PC hardware acceleration;
